Attn: Wayne and David

I decided to drop you a line expressing my appreciation for all your help in building my EMY Kit.

I have been working on a scheme to build a semi-portable water purifying and heating plant for the past 12 years.

This plant is designed to condense steam into distilled water and its performance is governed by being able to produce a constant supply of steam at a reasonable price.

I have tried various different types and methods and found your equipment works far better than any of the others tried.

Also your help in making up the plant has made the whole project feasible.

Yours truly

J. Alex Billwiller
